

L P U S P A R E K I T

The Lightning Protection Unit (LPU) Spare Kit is used to replace the internal components of a LPU that may have been damaged by a lightning strike. The kit consists of a three electrode gas filled surge protector tube and two MOV's. Remove connection to the original components at the terminal block and install this new kit. Make certain that the five connections are installed in the correct terminal block positions. Review the figure below to assist you in this installation.
